# AERIALGRIP

**Aerialgrip®** products offer a **complete** solution for pole hardware, for FTTX and outside plant applications, making the installation and identification effortless, **saving time and money**. This product line is manufactured in a combination of our **metal stamping** and **injection molding** factory.

# Injection Molding Factory

[www.foncs.com](http://www.foncs.com)

Since **2014**, our plant manufacturers various products through our **4 injection molding machines** such as cable markers and pole hardware.

## Metal Stamping Factory

Here we produce most of our **metal pole hardware**.

# PRODUCTS

**AERIALGRIP**

# Fiber Optic Storage Units

**AERIALGRIP**® Fiber storage units are sold as pairs and are used to conveniently store an extra length of cable for later use and can be used for a butt splice or in-line splices. **AERIALGRIP**® Cable Storage Units have been designed to **minimize labor and installation cost**, allowing emergency repairs, growth, splicing and maintenance for fiber optic cables in a **economical and easier way**.

**AERIALGRIP**

# AERIALGRIP

## ADDS Dead - End

The **AERIALGRIP**® Lite Tension Dead-End is designed to terminate short span for **fast and easy installation** of your ADSS cable. The Dead-End is a single layer component that offers an **economical solution** and is ideal for low tension & low voltage environments. This **unique low-cost product** is used in typical spans with 1%-2% installation sag. The product **effectively** transfers the low axial load on the cable at the end of the dead-end legs.

# Support for ADDS Cable

**AERIALGRIP®** offers **multiple** hardware options depending on cable OD, span distance, NESC conditions and line angles to gently but firmly suspend and distribute efforts on ADSS cable thru different cushion inserts to **avoid** slipping, cable damage and fiber attenuation. Designed for installation through strapping or screwing. Cushions are made from a soft, dielectric material that gently grips the ADSS cable. Our different suspensions options are made from Aluminium or hot dipped galvanized steel with the advantage that all components may be **reused** as desired.

They are made of Stainless steel and are used to **support both ends** in an aerial service drop installations. Because of its compact size, price and ease of use as well as the interchangeable shims this allows the installation from 1 to 6 drops depending on the cable size as well as the ability to use for different cable diameters that can be round, square or flat drop cable applications. In most cases the mechanical strength exceeds the yield strength of drop cables because of this it is used as a standard by the telecommunications industry.

## Fiber Drop Clamps

AERIALGRIP

## Wire Clamp

**AERIALGRIP®** offers **multiple versions** of high quality steel galvanized span clamps that can withstand corrosive environments and help relieve tension along the span at this point to **quickly install** fiber optic service and drop cables.

# Strap and Buckle

The stainless steel straps and buckles are very **versatile and easy to use** and give a clean appearance while **protecting against corrosion** that is why it has become the standard choice for a lot of our customers to fix our pole hardware to any round surfaces. **AerialGrip®** offers **multiple strap sizes** conveniently packaged in plastic totes for easy installation as well as the installation tools.

# Utility Markers & Warning tapes

AERIALGRIP

These products help the telecommunications & utility companies **quickly Identify** ownership of fiber optic cables & inner ducts and **prevent** costly digging accidents.

# Utility markers products

AERIALGRIP

- Free wrap around cable marking
- Hang Around cable Markers
- Underground Warning Tape  
detectable and non detectable
- Identification letters and numbers
- Cable tags
- Ground markers
