

# Flat Zipcord Cable

## FCA-XX-X-FZ-X-X-EX / 2 Fibers

### Description

Waveoptics Flat Zipcord Cables are designed for indoor and interconnection applications, general installation purposes, data centers or patch cord production, where consistency and uniformity are required for fast terminations. Flat Zipcord Cables consist of a zipcord sub-unit, covered by a flame retardant outer jacket.

The optical fibers are under a protective cover made of acrylate and a tight buffer. Aramid yarn as a strength member to provide excellent tensile strength during installation.

The following jacket and tight buffer materials are available:

**PVC RISER:** used in vertical installations. Prevents the spread of flames to higher floors, in case of fire. Riser cable jackets are rated for flame generation and are held to a lower standard compared to plenum cables.

**PVC PLENUM:** ideal for applications in spaces with good air circulation, such as low ceilings or under elevated floors. Resistant to fire and produces low smoke when burned. Cable jackets used in plenum spaces are rated for both flame and smoke generation.
